

## Use Sentry Quick Seal & Enhance when you want to enhance the color of the natural and artificial stone or concrete surface

You can add our stain to it as well so a concrete floor can be sealed and colored in one application. You can spray multiple coats to create patterns. It really is so simple. You can also use it on natural and artificial stone.

And not only is it simple, it is quick. Dry time is FIVE MINUTES and reapply time only TWO MINUTES. So you can seal the floor and get the drinks ready for the housewarming almost at the same time. How good is that??

Like our Multi-Purpose sealer, Sentry's Quick Seal & Enhance is a breathable high-performance sealer. It is water and stain-repellent and is another one in the Sentry stable of covalent molecular-bonding sealers. If you want added protection it is an ideal sealer under Sentry's Concrete Shield. And together Sentry's stained Quick Seal & Enhance and Concrete Shield are a complete and easy concrete floor color and seal system.

So give those old tiles or concrete a new lease of life with the beautiful natural colors that have been designed to enhance the enhancer. View available colors on our website.

### **Tough, durable, environmentally sound and free of carcinogens**

With less than 100g/L VOC it outperforms the most stringent air-quality controls in the US. Sentry also measures as being carcinogen free as defined by California Prop 65.
